

DIGIREADY

AI-Powered SME Digital
Readiness Diagnostic

ASEAN SMEs Lack a Clear Path to Digital Maturity.

DigiReady delivers an AI-generated, grant-linked digital roadmap in under 15 minutes — free, vendor-neutral, and benchmarked against IMDA industry data.

Industry

SME Digital Transformation / ASEAN

By

Agnella Agrata · SMU IS · GPA 3.75

DigiReady Closes a \$1B+ Gap in SME Digital Advisory

VISION

Democratise Digital Transformation

Every ASEAN SME owner understands their digital maturity and knows exactly what to do next for free.

MISSION

15-Min Diagnosis. Zero Advisory Cost.

Replace SGD 800–2,000 consultant engagements with an instant, AI-powered, grant-linked diagnostic.

MARKET

280K Singapore SMEs. SGD 140M SAM.

At \$15/assessment B2B tier, 1% conversion = SGD 420K ARR. ASEAN expansion multiplies by 25x.

IMPACT

Measurable Value Creation

- Diagnosis time: 3 consultant days → 15 min (30x faster)
- Advisor capacity: 30 SMEs/yr → 300 SMEs/yr (10x scale)
- Cost to SME: SGD 800–2,000 → SGD 0 free tier
- Roadmap quality: generic checklist → AI-scored + grant-matched

ROADMAP

3-Phase Scale Strategy

- Phase 1 — Singapore MVP: 3 industries, deploy to Render.com
- Phase 2 — Bank white-label: DBS/OCBC advisory integration
- Phase 3 — ASEAN: Indonesia, Vietnam, Philippines (70M+ SMEs)

70% of ASEAN SMEs Cannot Self-Diagnose Their Digital Gaps

70%

of Singapore SMEs have not fully digitalised

Source: IMDA SME Digital Index 2023

\$40K

on average SME wasted spend on mismatched digital tools

Source: SME Digital Readiness Survey 2022

50%

of Singapore GDP from SMEs are employing 70% of workforce

Source: MTI Singapore 2023

Key Pain Points

Vendor conflict of interest pervades the market

Owners are domain experts, not technology evaluators. There is no structured, vendor-neutral tool to guide self-diagnosis.

No neutral self-assessment framework exists

Existing advisors recommend their own products. Independent diagnostic tools don't exist at SME price points.

Government checklists lack personalisation and sequencing

IMDA's SME Digital Scorecard offers static scoring. No industry benchmarking, no adaptive logic, no grant linkage.

Mis-sequenced adoption wastes transformation budget

Tools bought before a baseline assessment go unused — estimated SGD 40K lost per SME on average.

Six Systemic Failures Prevent SME Digital Self-Assessment

MAN

People & Skills

- Owners lack digital literacy to evaluate tools
- No internal champion to drive adoption
- Staff resistant to workflow change

METHOD

Process & Frameworks

- No structured diagnostic methodology for SMEs
- Linear checklists — no adaptive branching logic
- No sequencing: owners skip straight to solutions

MACHINE

Technology

- Legacy tools are desktop-only, non-integrated
- No AI layer to personalise recommendations
- Grant databases not linked to diagnostic outputs

EFFECT

SMEs Cannot Self-Diagnose
Digital Readiness

MATERIAL

Data & Information

- No industry-level SME benchmark datasets published
- IMDA data is aggregate — not pillar-level
- Recommendations not grounded in peer comparisons

MEASUREMENT

Metrics & KPIs

- No standardised scoring across digital pillars
- ROI of digital tools not quantified for SMEs
- Govt tracks license counts, not adoption quality

MANAGEMENT

Market & Incentives

- Vendors incentivised to oversell own solutions
- Consultants cost SGD 800–2K/session (inaccessible)
- Government tools lack personalisation investment

A \$1 Trillion Digital Economy Creates an Immediate, Quantifiable Opportunity

ASEAN Digital Economy (USD Bn)

Source: Google-Temasek-Bain e-Economy SEA 2023

Addressable Market (Singapore)

TAM: 280K SG SMEs × SGD 500 advisory spend/yr **SGD 140M**

SAM: 30% early adopters in 3 target industries **SGD 42M**

SOM: 5% Year 1 capture at B2B price point **SGD 2.1M**

Market Tailwinds

SGD 1B+ in Grants Underutilised

Low SME awareness means grant budgets go unspent. DigiReady is the access layer between SMEs and government funding.

B2B2G Revenue Model

White-label for DBS/OCBC SME portals at point of loan application — zero customer acquisition cost for Phase 2.

70M+ Addressable ASEAN SMEs

Indonesia, Vietnam, Philippines localisation creates a defensible regional platform with 25× the SG market.

Supply Gap: 10× Advisor Capacity

1 advisor serves ~30 SMEs/yr manually. DigiReady pre-qualifies 300+/yr — transforming advisory economics.

Five Weighted Pillars Produce a Validated, Industry-Benchmarked Score

Sample Output — F&B Business, 6-30 Staff

Benchmarked against F&B industry average · Source: IMDA SME Digital Index 2023

SCORING METHODOLOGY

Pillar Score

$$\Sigma(Q \text{ scores}) / \text{max} \times 100$$

Weights

- < 50 Low

Data Sources

IMDA SME Digital Index 2023

EDB Digital Readiness Reports

SME Digital Scorecard (IMDA)

→ Post-launch: real user data replaces static baselines (proprietary moat)

A Modular, Cloud-Native Architecture Enables Fast Iteration and Scale

The Intelligence is in the Scoring Engine — Not the Language Model

How the AI Layer Actually Works

1

Scoring Engine

Weighted pillar scores computed deterministically from survey responses. No AI involved here.

2

Action Selection

Rule engine selects the 6 recommended actions from a validated 30-action library. AI cannot add actions outside this list.

3

Constrained Prompt

A structured JSON object — scores, weakest pillars, pre-selected action IDs — is sent to Gemini. No free-form generation.

4

Language Generation

Gemini writes plain-English explanations for why each pre-selected action matters for this specific business. Output is 2 sentences max.

5

Guardrail Validation

Output is validated against the action whitelist before display. Gemini cannot invent grants, tools, or recommendations.

Prompt Architecture (Schematic)

```
INPUT → {  
  industry: "F&B",  
  company_size: "small",  
  weakest: [cyb, cx, cloud],  
  actions: [id_4, id_7, id_2]  
}
```

LLM TASK →

Explain why action_id_4 is
top priority for this exact
business. Max 2 sentences.

GUARDRAIL →

Validate output ∈ action_ids
Reject if hallucination detected

Result: removing the LLM degrades explanation quality, not recommendation quality.

Free-to-Freemium Positions DigiReady as Infrastructure, Not a Tool

FREE TIER

Customer Acquisition

Who pays: SME owners (direct)

SGD 0

Permanently free

- ✓ Full 25-question diagnostic
- ✓ 5-pillar scored report
- ✓ Basic grant matching
- ✓ PDF export

B2B TIER

SaaS Revenue

Who pays: Banks / Advisors / Gov agencies

SGD 15

per assessment

- ✓ All free features
- ✓ Advisor dashboard
- ✓ Portfolio tracking
- ✓ API access + white-label

B2B2G TIER

Enterprise Licensing

Who pays: Government / Development banks

SGD 80K

annual licence

- ✓ Unlimited assessments
- ✓ Custom benchmarks
- ✓ Policy analytics dashboard
- ✓ MAS/IMDA co-branding

Revenue waterfall at scale:

Combined Year 2 target

~SGD 910K ARR

DigiReady Delivers a 30× Efficiency Gain and 10× Advisor Scale

30×

Faster Diagnosis

3 days → 15 min

** Estimate based on avg SME advisory engagement duration (IMDA)*

10×

Advisor Capacity

30 → 300 SMEs/yr

** Based on pre-assessment eliminating 80% of baseline data-gathering*

100%

Cost Reduction

Free to SMEs

** Free tier permanently subsidised by B2B revenue from advisor tier*

Metric	Without DigiReady	With DigiReady	Improvement
Time to diagnosis	2–3 consultant days	< 15 minutes	~30× faster*
SMEs per advisor/yr	~30 SMEs	~300 SMEs	10× capacity*
Cost per SME	SGD 800–2,000	SGD 0 (free tier)	100% reduction
Grant link accuracy	Manual, inconsistent	Auto-matched PSG/EDG/CSP	Structured + repeatable
Data at intake	None — cold engagement	Full baseline pre-assessment	Warm pipeline leads

** Estimated based on methodology on Slide 6. All metrics are author's analysis unless sourced.*

DigiReady Wins Where Existing Solutions – Including Government Tools – Fall Short

ALTERNATIVE	THEIR CORE LIMITATION	DIGIREADY ADVANTAGE	WHY IT MATTERS
★ CLOSEST EXISTING COMPETITOR			
IMDA SME Digital Scorecard (closest existing tool)	✗ Static score, no AI layer, no grant matching, no roadmap sequencing logic	✓ Adaptive scoring + AI roadmap + 30-action library + grant-linked output	<i>DigiReady addresses the exact gap IMDA's tool leaves open</i>
Hiring a Consultant (SGD 800–2,000)	✗ Expensive, weeks to schedule, vendor conflict of interest, no scalability	✓ Free, instant, vendor-neutral — democratises access for micro-SMEs	<i>Opens the market to the 80% who can't afford consultants</i>
Generic AI Chatbots (ChatGPT, Claude)	✗ Unstructured output, no benchmark data, high hallucination risk, no grants	✓ Deterministic scoring → constrained LLM → whitelist-guardrailed output	<i>Structured + trustworthy: AI enhances, rules protect</i>
Gartner / McKinsey Digital Maturity Models	✗ Enterprise-only pricing, weeks of consulting engagement, SME-inaccessible	✓ SME-native design: 15 min, free, calibrated to ASEAN SME context	<i>First mover in SME-native, ASEAN-benchmarked diagnostic segment</i>

DigiReady is the only solution that is vendor-neutral, AI-scored, industry-benchmarked, grant-linked, and free — in a single 15-minute diagnostic.

Four Identified Risks Are Each Fully Mitigated by Design

LLM Hallucination in Roadmap

Likelihood: Medium

Impact: High

Mitigation:

Rule engine selects all recommendations from a 30-action validated library. Gemini writes explanations only — it cannot add, remove, or modify actions. Output validated against action whitelist before display.

Benchmark Data Quality

Likelihood: Medium

Impact: High

Mitigation:

MVP benchmarks synthesised from IMDA Digital Index, EDB reports, and SME Scorecard data. Post-launch, real user responses iteratively replace static baselines — creating a proprietary, improving benchmark dataset as a long-term moat.

Low SME Trust in AI Advice

Likelihood: High

Impact: Medium

Mitigation:

Framed as a 'diagnostic tool', not 'AI advisor'. All recommendations cite named vendors and real government grants (PSG/EDG/CSP). Transparency in sourcing is the primary trust driver. User interviews show 4/5 found it credible.

Scope Creep / Delivery Risk

Likelihood: Low

Impact: Medium

Mitigation:

Hard MVP boundary: diagnosis + report only. Modular architecture isolates layers — Phase 2 features are additive. Architecture slide shows each layer is independently deployable and upgradeable.
